CAREER OBJECTIVE

Computer Science undergraduate with a strong foundation in DevOps tools, Linux, Java, and AWS, along with hands-on experience through academic projects and internship work. Interested in cloud infrastructure, automation, and CI/CD practices. Seeking an opportunity to apply my skills, gain practical industry experience, and grow as a DevOps and Cloud engineer.

EDUCATION

Neil Gogte Institute of Technology (NGIT) **2023 – 2027**
BE in Computer Science Engineering CGPA: 8.0 / 10

St. Ann's High School (ISC) **2021 – 2023**
Higher Secondary Education (Class XII) Percentage: 77

St. Ann's High School (ICSE) **2020 – 2021**
Secondary School Education (Class X) Percentage: 86

TECHNICAL SKILLS

Languages:	Java, C
Core CS:	Data Structures & Algorithms, Object-Oriented Programming, DBMS
Backend:	Node.js, Express.js, REST APIs, Middleware
Cloud & OS:	AWS , Linux
DevOps:	Docker, Jenkins, GitHub Actions, Ansible, SonarQube,Nexus, Terraform
Database:	SQL, MongoDB

EXPERIENCE

Dexaminds — DevOps Intern **Aug 2026 – Present**

- Contributing to CI/CD pipeline design and automation using Jenkins and GitHub Actions for containerized microservice deployments.
- Assisting in provisioning and configuring AWS infrastructure (EC2, IAM roles, security groups) for development
- Writing and maintaining Ansible playbooks to automate configuration management and deployments across multiple Linux servers.

PROJECTS

Multi-Service CI/CD Pipeline using Jenkins & Docker Swarm *Jun 2026 – Aug 2026*

- Built a Jenkins pipeline to build, tag, and push parameterized Docker images for four microservices to Docker Hub.
- Deployed the containerized stack on a multi-node Docker Swarm cluster with replicated services for high availability.
- Enabled zero-downtime rolling updates/rollbacks and load-balanced traffic across replicas using Nginx.

LAMP Stack – Highly Available WordPress Deployment *Jul 2024 – Oct 2024*

- Deployed a highly available LAMP stack on AWS using an Application Load Balancer, Auto Scaling Group, and RDS (MySQL).
- Configured EC2 instances with Apache2, PHP, and MySQL client via a custom WordPress AMI Launch Template.
- Performed a live RDS Blue/Green engine upgrade from MySQL 8.0.42 to 8.0.43 with zero downtime.

GitHub Actions CI/CD Pipeline with Self-Hosted Runner *Feb 2025 – May 2025*

- Built a GitHub Actions workflow with Maven build, SonarQube code-quality analysis, and dependency caching.
- Configured a self-hosted GitHub Actions runner on an AWS EC2 instance for build and deployment jobs.
- Automated WAR deployment to Tomcat via its Manager API using GitHub-encrypted secrets on every push.

ACHIEVEMENTS

- Winner — TechTonic Hackathon (2024)
- 2nd Runner Up - Hackfinity 2025 (National-level AI & DS Hackathon)
- National-level Participant - Declamation Competition

CERTIFICATIONS & LEARNING GOALS

- Introduction to Kubernetes (LFS158) - The Linux Foundation
- GitOps for Amazon EKS Automation - AWS
- Networking Basics - Cisco Networking Academy
- Implement security through a pipeline using Azure DevOps - Microsoft
